

Episode 6: Artificial intelligence is bias-free

Overview: Many people think of AI as objective and neutral, something that not only makes our lives easier, but also helps us to eliminate the biases that plague human cognition and decision-making. While it's true AI can do a lot for us, it's a myth that AI is bias-free. In fact, AI can amplify the bias and perpetuate the inequality that is already rampant in our society. In this episode, we'll explore how and why AI isn't as fair as we'd like to believe, the consequences of bias in AI, and what responsible and ethical AI could look like.
